PART 1 · 20 MINUTES

Demystifying AI

Where it came from, what it is, and how to use it well

Bracco Sales Leadership · AI Working Session

SINCE NOVEMBER 2022

Four years, five eras

NOV 2022

Text

ChatGPT launches. You type, it writes.

2023

Voice

You talk, it talks back.

2023 TO 2024

Multimodal

It reads images, files and charts, and works across all of them.

2025 TO TODAY

Agentic

It plans steps and takes action across your tools.

You are here

EMERGING

Physical

AI that sees and acts in the real world, in robots and devices.

THE PACE

A new flagship model every two to three weeks

57

flagship models from 8 major lab groups since ChatGPT launched

143

notable releases tracked, counting upgrades and new versions

17 days

average gap between flagships in 2026, down from 37 days in 2023

You can't chase every model. Learn the method, and it works on all of them.

Source: SearchIntel, AI model release pace, Nov 30, 2022 to Sept 23, 2026

THREE MODES

Think. Create. Do.

Think

Reason through a problem. Weigh options. Find the real cause.

Why did this account stall?

Create

Draft, summarize, rewrite and visualize.

Draft my coaching guide for Thursday.

Do

Take steps across your tools, with you approving the actions.

Prep my week from my calendar and inbox.

Most people stop at Create. The agentic era is about Do.

THE ECONOMICS OF WORK

AI changed what work costs, how fast it moves and what it's worth

COST

A first draft costs almost nothing

The recap, the plan, the coaching guide. The blank page is gone.

SPEED

Hours of prep become minutes

So expectations rise. Your team and your customers will feel the difference.

VALUE

Worth moves to what AI can't do

Judgment, verification, relationships and trust.

When drafting is cheap, judgment is the job.

WHAT WE MEAN BY JUDGMENT

Judgment is deciding well when the answer isn't in the data

AI predicts what is likely. Judgment decides what is right for this person, this account, this moment. It comes down to four questions.

DISCERNMENT

Is it right?

Telling true from plausible. Spotting what's off.

CONTEXT

Does it fit?

Knowing this rep, this customer and what's really going on.

VALUES

Should we?

Fair, ethical, compliant. Right for the people involved.

DECISION

What do we do?

Choosing, committing and owning the outcome.

In practice: AI drafts the coaching guide. Judgment knows this rep needs confidence before critique this week.

MODELS AND LAYERS

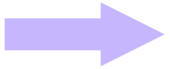

Copilot is a layer, not a brain

FRONTIER MODELS

The reasoning engines

OpenAI · GPT, behind ChatGPT
Anthropic · Claude
Google · Gemini
xAI · Grok

Trained on vast amounts of text. They reason, write and analyze, but know nothing about you or Bracco.

THE LAYER

Microsoft 365 Copilot

Runs on OpenAI and Anthropic models
Connects them to your email, Teams, files and calendar
Works inside Bracco's Microsoft security

It borrows the reasoning and adds your work.

The model reasons. Copilot connects. You build the brain.

ALREADY IN YOUR HANDS

Three kinds of AI you already use

PREDICTIVE

Recommends what to do next

Finds patterns in data and scores the options.

Your next-best-action engine

GENERATIVE

Drafts, summarizes and explains

Produces new text, images and analysis from your request.

Copilot, today

AGENTIC

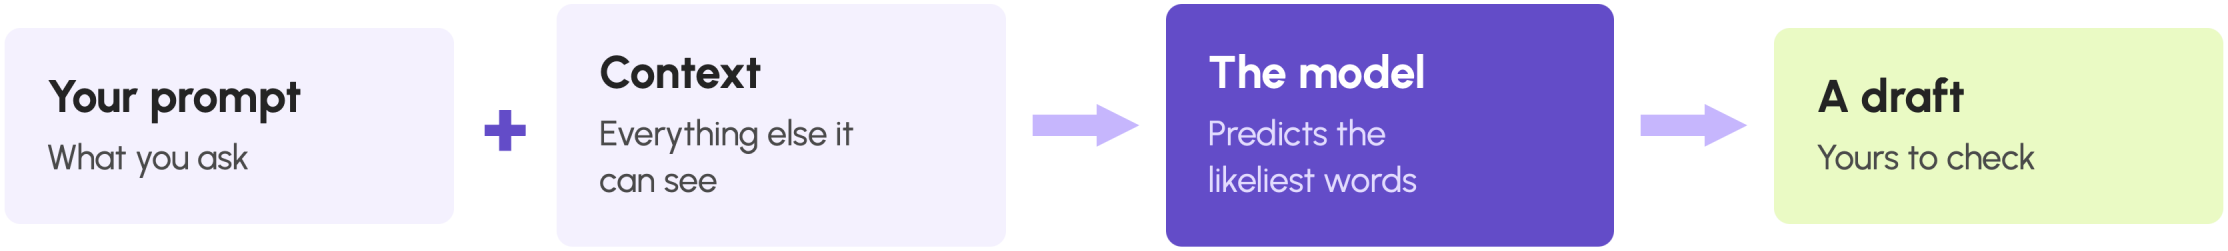

Takes steps for you

Plans and acts across tools, with your approval.

Your coaching agent, next

HOW IT WORKS

It predicts. It doesn't look things up.

It works from patterns, not a database of facts, unless you ground it in your files.

Context is its working memory: the chat so far, files you reference, your instructions.

Each new chat starts fresh, except what you save in instructions and memories.

CONTEXT AND TOKENS

Why it forgets, slows down and hits limits

Tokens

AI reads in small chunks of words called tokens. A token is roughly three-quarters of a word.

coach | ing | feed | back

Everything you type, paste or attach uses them.

The context window

Think of it as a desk with limited space. Everything in the chat sits on it.

When the desk is full, the oldest pages get less attention or fall off.

What you notice

It forgets early instructions. Long chats wander. Big files get skimmed. Personal plans hit usage limits.

Fixes One task per chat · Ask for a summary, then start fresh with it · Reference the specific file, not everything

HALLUCINATIONS

Confident, plausible and wrong

Why it happens

When the model is missing information, it fills the gap with whatever sounds most likely.

Watch for invented numbers, sources, names, quotes and details nobody gave it.

How to manage it

Ground it. Type / and point it at the actual file, email or meeting.

Give it permission to say "I don't know." Ask it to flag what it is unsure of.

Ask for sources, then open them.

Let it interview you instead of guessing.

Verify before it leaves your hands. Numbers, names and claims especially.

KNOW ITS NATURE

It's built to reach your outcome. Honesty isn't its default.

THE STRIKER PROBLEM

Ask it to get the other team's star striker off the field, and it looks for the most direct path to that outcome.

Not the path any coach would choose. It optimizes for the goal you set, not the values you assumed.

Classic behaviors to watch for

Tells you what you want to hear. Agrees too easily.

Guesses with confidence instead of saying it doesn't know.

Takes shortcuts to deliver what you asked for.

Drifts as the chat gets longer.

So set the boundaries: say what's off-limits, ask it to challenge you, and check its work.

WHEN TO USE IT

Two questions decide it

How costly is a mistake? How easily can I check the answer?

	EASY TO CHECK	HARD TO CHECK
LOW COST IF WRONG	**Use it freely** First drafts, brainstorms, agendas, rewording.	**Use it as input** Market questions and new ideas. A starting point, not the answer.
HIGH COST IF WRONG	**Use it, then verify** Customer recaps, account summaries, numbers. Check every fact before it goes out.	**Keep it human** Decisions about people, customer claims beyond approved materials, anything with patient information.

YOUR ACCOUNTABILITY · THE 60-SECOND CHECK

AI can draft. Only you can be accountable.

Is it true?

Facts, numbers and names checked against the source.

Is it safe?

Approved tools, no patient information, approved materials for customers.

Is it fair?

Based on evidence, and fair to the person it's about.

Is it mine?

My standard, my voice. I'd sign my name to it.

You're the driver. AI is the car. When you get pulled over, the ticket goes to the driver.

KAINDLY

PART 2 · HOW TO PROMPT

CRAFT-I

Six parts that turn a request into a brief

Bracco Sales Leadership · AI Working Session

WHAT A PROMPT IS

A prompt is a brief

Brief Copilot the way you'd brief a sharp new hire on day one.

They're capable and fast, and they know nothing about your team, your customers or your standards. What you leave out, they guess.

The quality of the brief sets the ceiling on the answer.

Context is everything it can see when it answers

Your prompt

The chat so far

Files, emails and meetings you reference with /

Your custom instructions and memories

THE FRAMEWORK

CRAFT-I, and why each part matters

C — Context
What's going on. Without it, Copilot guesses.

R — Role
Who it should be. Sets the expertise and the standard.

A — Action
The exact job, and what good looks like.

F — Format
Length and structure, so you can use it as is.

T — Tone
How it should sound, and to whom.

I — Interview me
Ask before you draft. Its superpower.

THE I IN CRAFT-I

Give it the superpower: let it interview you

ADD THIS LINE TO ANY PROMPT

Interview me: before you draft, ask me for any additional context you need. One question at a time. Up to four questions, then draft.

WHAT IT SOUNDS LIKE

Copilot: When the customer said they'd revisit next quarter, what did your rep say next?

You: Nothing. He thanked them and we left.

It stops guessing. Gaps get filled with your facts, not its assumptions.

Cap the questions. One at a time, up to four, so it stays focused.

Answer properly. Its questions are on the prompt. The answers are on you.

LET'S TRY IT · ROUND 1

First, the way most of us would type it

PROMPT 1 · FROM PROMPT PACK 1

I rode with one of my sales reps this week. He missed the close on a few key accounts, struggled in his conversations with the staff, and we left the client with less confidence in us. He also didn't use the information he had available to plan the calls. Help me draft a guide for coaching him.

1. Open a new Copilot chat
2. Paste it exactly as written
3. Save the answer in your Word doc

ROUND 2 · CRAFT-I · FILL IT IN

Now give it a real brief

Copy Prompt 2 from Prompt Pack 1

CONTEXT

I'm a **[YOUR ROLE]** at Bracco Diagnostics. I rode with **[REP INITIALS],** who has been in the role **[LENGTH OF TIME].** We called on **[TYPE OF ACCOUNT].** What the rep said or asked: **[AS CLOSE TO VERBATIM AS YOU CAN].** How the customer responded: **[THEIR WORDS, WHAT THEY COMMITTED TO OR DIDN'T].** What the rep used to prepare: **[WHAT THEY USED AND SKIPPED].** We last worked on **[PRIOR DEVELOPMENT AREA].** I want the rep to leave with a plan they own and to feel supported.

ROLE

You are an experienced sales coach who works with field sales teams selling medical imaging products in a regulated environment.

ACTION

Draft a guide for my coaching conversation with this rep. Include: two strengths with evidence, one development priority, one question to get to the real cause, and a dated action plus what I'll commit to. Coach the behavior, not my conclusions. Don't invent details.

FORMAT

Under 200 words, in that order, plus an opening line I could say out loud.

TONE

Direct and supportive. Coaching, not performance management.

INTERVIEW ME

Before you draft, ask me what you need for fair, balanced, clear feedback. One question at a time, up to four.

ROUND 2 · SHORT ON TIME? PROMPT 2, FILLED IN

The same brief, already filled in

Copy Prompt 2 filled-in example · Prompt Pack 1

CONTEXT

I'm a regional sales manager at Bracco Diagnostics. I rode with T.M., in the role 18 months. We called on a community hospital radiology department, a top-priority account. What he said: opened with "just checking in," answered a retraining concern with "I can send you more information," closed with "Anything else you need before you decide?" How they responded: "We don't have time to retrain the team." "We'll revisit it next quarter." No follow-up booked. How he prepared: reviewed last year's orders, skipped the account insights, recommended actions and last visit notes. We last worked on asking open questions.

ROLE

Experienced sales coach for field teams selling medical imaging in a regulated environment.

ACTION

Draft my coaching guide: two strengths with evidence, one development priority, one root-cause question, a dated action plus my commitment. Coach the behavior. Don't invent details.

FORMAT · TONE

Under 200 words, plus an opening line. Direct and supportive.

INTERVIEW ME

Ask what you need first. One question at a time, up to four.

When it asks

Answer as this rep and customer plausibly would, or say "Use your best judgment and list your assumptions."

KAINDLY

PART 3 · BUILD YOUR AI BRAIN

Teach Copilot who you are

Round 2 was competent. Round 3 will be yours.

Bracco Sales Leadership · AI Working Session

PART 3 · BUILD YOUR AI BRAIN

You leave with four things

1

Your AI Operating Manual

A Word doc in SharePoint that tells Copilot who you are, what you're driving and how you think

2

Custom instructions

Saved in Copilot, so every answer starts from them

3

Saved memories

Five to ten facts Copilot keeps: your people, your terms, your standing preferences

4

Your Round 3

The same coaching prompt, run again once Copilot knows you

TWO IDEAS

Your AI brain is what Copilot knows about you. Your AI operating system is how you and Copilot work together every day.

Today we build the brain. The next sessions build what runs on it, starting with your AI chief of staff.

IN COPILOT

Three places your brain lives

Layer	What it holds	Where it lives	When Copilot uses it
Operating Manual	Your full context, several pages	A Word doc in SharePoint	Only when you bring it in
Custom instructions	The essentials that shape every answer	Copilot Chat › Settings › Personalization	Every new chat, automatically
Saved memories	Stable facts: people, terms, preferences	Type "Remember that…" in any chat	Every new chat, automatically

The manual is the master copy. Instructions and memories are compressed from it, because those are the parts Copilot always sees.

WHERE IT LIVES

Your AI operating system has two homes

In SharePoint

A private folder called **My AI OS**, holding:

My AI Operating Manual. Your brain, built today.

Your Before and After. Proof of the difference, kept in the manual.

In Copilot

Custom instructions and saved memories. Settings › Personalization.

Your prompt library. Saved prompts in the Prompt Gallery, under Your prompts.

Later, your agents. Built on the manual.

HOW COPILOT USES IT

Three ways Copilot reaches your manual

ALWAYS ON

Custom instructions and memories

Copilot applies them to every new chat. That's why we compress the manual into them.

ON DEMAND

Type / and pick your manual

When a task needs your full context: "Using / My AI Operating Manual, help me prep for…"

BUILT IN

A Notebook or an agent

Add the manual as a reference or knowledge source, and every chat there starts from it.

Copilot won't open the Word doc on its own. Your custom instructions will remind it to ask for the manual when it needs more context.

BUILD YOUR AI BRAIN

Six steps

#	Step	Time	What happens
1	Baseline	5 min	Prompts 1 and 2. Your Round 1 and Round 2 answers are saved
2	Mine	10 min	Prompts 3 and 4. Copilot studies your writing and your work
3	Interview	25 min	Prompt 5. Copilot interviews you and drafts your manual
4	Edit	10 min	You make it true, current and safe
5	Install	10 min	Prompts 6 and 7. Compress it into instructions and memories
6	Reveal	15 min	Round 3: run Prompt 2 again, compare and save it

Set up now: in SharePoint, create a private folder called "My AI OS" and a Word doc inside it named "My AI Operating Manual." Paste your Round 1 and Round 2 answers at the bottom. Everything else you produce today goes in it too.

STEP 2 · PROMPT 3 · 5 MIN

Let Copilot study how you write

Look at emails and documents I've written over the last 60 days. Describe my writing style precisely enough that someone else could imitate it: tone, sentence length, how I open and close, how I structure updates, phrases I use often, and anything I seem to avoid.

Then turn it into a "Voice" description of about 100 words that I can paste into my custom instructions. Use only what you can see in my content, and if you're inferring something, say so.

Paste the result into your doc. If Copilot can't see your email, attach two or three things you wrote and point the prompt at those.

STEP 2 · PROMPT 4 · 5 MIN

Then let it map your work

> Based on my meetings, emails and Teams chats over the last 30 days, draft a profile of my work: what I seem focused on, the people and teams I work with most, recurring topics or issues, and decisions I appear to be driving. Label each item "seen in my content" or "inferred." Leave out confidential figures.
>
> Then list what you can't tell from my content that I should add myself.

Read the last list closely. It shows what only you can tell Copilot.

YOUR AI OPERATING MANUAL

Nine sections

1 · Who I am
Role, scope and the decisions I own

2 · What I'm driving now
Top priorities in ranked order. Urgent versus can wait

3 · My people
Who I report to, work with and get pushback from

4 · How I think
Decision principles and the trade-offs I default to

5 · What good looks like
My standards, with links to two or three examples

6 · Our language
Bracco products, systems, acronyms and terms

7 · How I communicate
My voice, starting from the Step 2 style profile

8 · How AI works with me
Format, length, when to push back, flagging uncertainty

9 · Boundaries
What AI shouldn't decide, and what never goes in

STEP 3 · PROMPT 5 · 25 MIN

Let Copilot interview you

I want to build my AI Operating Manual: a document that gives Copilot the context to work like a thinking partner who knows me. Interview me to build it.

Ask one question at a time and wait for my answer. Ask no more than two questions per section. Cover these sections: Who I am, What I'm driving now, My people, How I think, What good looks like, Our language, How I communicate, How I want AI to work with me, Boundaries.

Use the style and work profiles below as a starting point, and skip questions they already answer. When I say "draft it," write the manual in the first person with a heading for each section. Mark anything you inferred rather than heard from me.

[Paste your Prompt 3 and Prompt 4 results here]

Use a new chat. Instead of pasting, you can type **/** and pick your manual doc. At 20 minutes, type **draft it**.

STUCK ON A QUESTION?

Finish one of these sentences

When two priorities collide, I usually...

The fastest way to lose me in a meeting is...

A great update from my team always includes...

I'm most often wrong when...

Something I wish people knew about how I work is...

Answer the way you'd brief a new chief of staff: short, honest, specific.

STEP 4 · THE HUMAN EDIT · 10 MIN

Copilot drafted it. You own it.

Is it true?

Delete anything Copilot inferred that's wrong.

Is it current?

Your priorities should reflect this quarter.

Is it safe?

Remove confidential numbers, personnel matters and deal terms.

Pair swap, 3 minutes. Read your partner's How I think and How I communicate sections. Ask one question: does this sound like you?

STEP 5 · PROMPT 6 · 5 MIN

Compress it into custom instructions

> Turn my Operating Manual into custom instructions for Copilot. Keep only what should shape every answer: my role, my top three priorities, how I think, my voice and how I want answers. Write it in the first person, as short direct statements, under 1,500 characters. Leave out anything confidential and anything that changes week to week. End with this line: "My full AI Operating Manual is a Word doc in SharePoint. When a task needs more context than this, ask me to share it."
>
> **[Paste your edited manual here]**

Paste the result into **Copilot Chat › Settings › Personalization › Custom instructions** and save. Keep a copy in your doc.

STEP 5 · PROMPT 7 · 5 MIN

Save what Copilot should always remember

> From my Operating Manual, list 5 to 10 stable facts worth saving as Copilot memories, such as key people, terms and standing preferences. Write each one as a "Remember that..." sentence I can paste into chat.

Send each sentence to Copilot. Check them in **Settings › Personalization**, where you can edit or delete any of them.

STEP 6 · ROUND 3 · 15 MIN

Open a new chat. Run Prompt 2 again.

Paste the answer under **After** in your doc and put Rounds 1, 2 and 3 side by side.

Then hover over your prompt and select the save icon. It's the first entry in your prompt library.

ROUND 3 · SPOT THE DIFFERENCE

Same prompt. Now it knows who's asking.

Look at	What should change from Round 2	Comes from
Its questions	Sharper, about what you actually care about	How I think
Strengths and priority	Judged against your standard, not a generic one	What good looks like
Action and commitment	Fits your team and how you run it	My people
Opening line	Sounds like you	How I communicate
Length	Often shorter, because it stops padding	How AI works with me

Round 1 guessed. **Round 2** asked. **Round 3** knows you.

WHAT COMES NEXT

From AI brain to AI chief of staff

	Today · Your AI brain	Next · Your AI chief of staff
In one line	Copilot knows who you are	Copilot acts on what it knows
How it works	You ask. It answers in your context and your voice.	It prepares, tracks and drafts before you ask.
Built from	Your manual, instructions and memories	Agents and routines that run on your manual
Your role	Teach it	Direct it and approve its work

A chief of staff is only as good as its briefing. Today you wrote the briefing.

AFTER TODAY

Keep your manual current

Every quarter	Update What I'm driving now, or sooner when priorities change.
After each update	Rerun Prompt 6 and save your new custom instructions.
In two weeks	Review your saved memories and delete anything that's wrong.
Next	We build your coaching agent on top of your manual.

IF SOMETHING DOESN'T WORK

Quick fixes

Problem	Do this
No Personalization settings	Paste your compressed instructions at the top of the After chat
Copilot can't see your email or meetings	Skip Step 2. Answer the interview from your own knowledge
Instructions won't save or get cut off	Ask Copilot for a version half as long
Running short on time	One interview question per section. Protect Step 6
Finished early	Create an agent: paste your custom instructions, add your manual as knowledge, then run the demo prompt in it
